Supplemental Information 2: Restraint Stress

Restraint stress specific, differentially expressed genes by tissue and sex. Each table contains differentially expressed genes that were unique to restraint stress, which are either sex-specific or overlapping across sex. We report log fold change (logFC) and false discovery rate (FDR<0.01). Upregulated genes are highlighted in red and downregulated genes are blue.

Table 1: Sex-specific, restraint stress responsive genes that were differentially expressed in the female hypothalamus
